LIST OF EFFECTIVE PAGES

The list of effective pages gives the most recent date on which the technical material on any given page was altered. If a page is simply rearranged because of a technical change on a previous page, it is not listed as a changed page. Within the manual, changes are marked with a vertical bar in the margin.

All pages original issue.....APRIL 1980

PRINTING HISTORY

New editions incorporate all update material since the previous edition. Update packages, which are issued between editions, contain additional and replacement pages to be merged into the manual by the customer. The date on the title page changes only when a new edition is published. If minor corrections and updates are incorporated, then the manual is reprinted but neither the date on the title page nor the edition change.

First Printing.....APRIL 1980

GENERAL INFORMATION

This Engineering Diagrams Set provides schematics, component layouts, and signal and power distribution diagrams for the HP 3000 Series III Computer Systems.

Products 32421A and 32435A are included. Many of the diagrams are common to both. THOSE UNIQUE TO ONE OF THE PRODUCTS ARE LABELED ACCORDINGLY.

The Set is divided into four sections. Section 1 contains rack diagrams and power and signal wiring information. Diagrams and tables unique to the 32421A appear first, followed by those for the 32435A; diagrams and tables common to both products appear last.

Section II contains the schematics and component location diagrams for the CPU and Memory Modules. They appear in numerical order.

Section III contains I/O PCA diagrams, in numerical order.

Section IV contains individual power supply diagrams. Those for the 32421A appear first, followed by those for the 32435A.

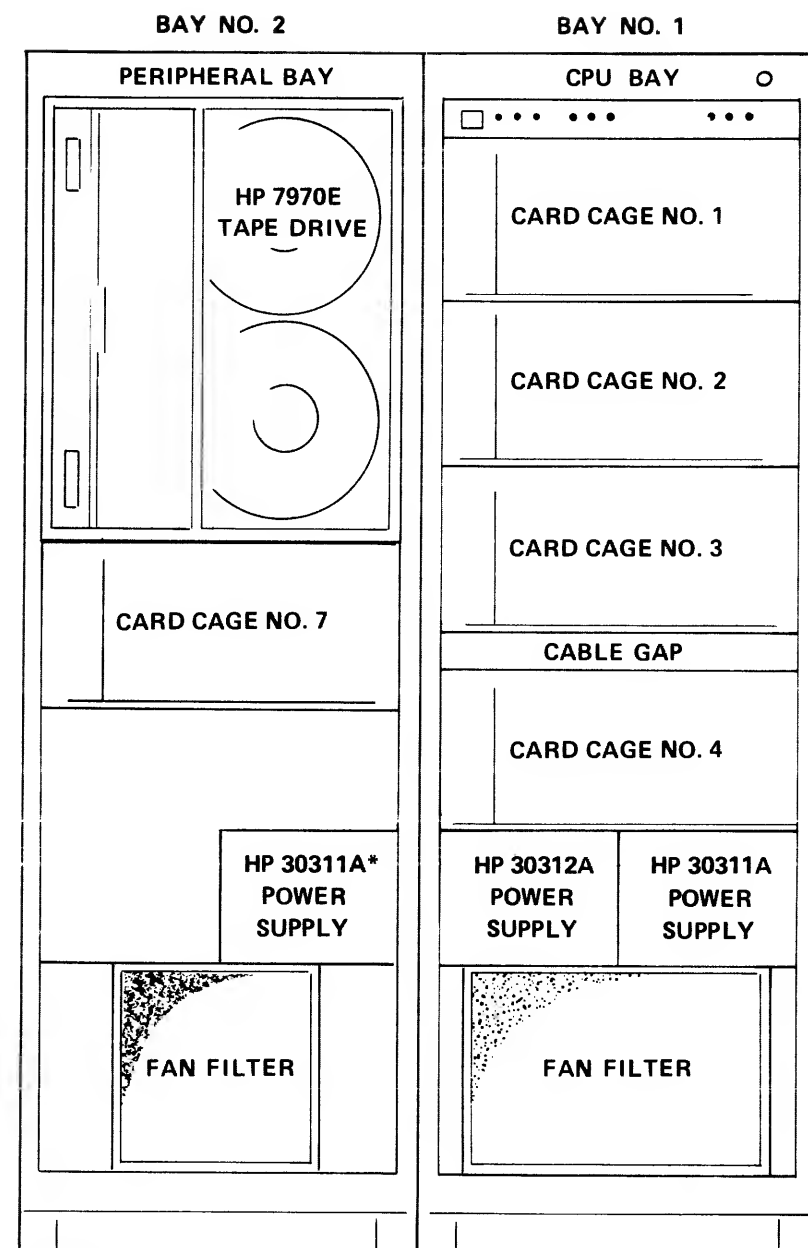

NOTE

On some diagrams, a box containing dates appears in the upper right corner. THOSE DATES SHOULD BE IGNORED. Each PCA was examined for changes shortly before this set was printed in April 1980.

SECTION I - RACK DIAGRAMS/POWER AND SIGNAL WIRING LAYOUTS

Table 1-5. Power Control and Indicator Functions (32421A)

DC Control Panel	Function
SYSTEM ON/STANDBY toggle switch.	In the ON position, enables DC voltage outputs of the HP 30310A and 30312A Power Supplies. In STANDBY, all DC power supply outputs are disabled. Batteries are then sustaining memory.
SYSTEM DC POWER indicator	Implies that system DC power is on by using +5 volts from the HP 30310A Power Supply to light its LED.
UPPER 128K MEMORY ON/STANDBY 2-pole toggle switch	In the ON position, one pole generates a DC Enable signal to its HP 30311A Power Supply. If the power supply is turned on, and if the SYSTEM ON/STANDBY and LOWER 128K MEMORY ON/STANDBY switches are ON, the power supply will power memory and maintain the charge on its battery. If either or both of these other switches are set to STANDBY, the HP 30311A powers memory by its battery backup power to the memory "refresh" circuits.. The second pole maintains continuity of the system DC Enable line which enables the HP 30310A and HP 30312A Power Supply outputs. In the STANDBY position, the system DC Enable line is opened and all DC power supply outputs, except battery backuppowers to the lower 128K of memory, are disabled.
UPPER 128K MEMORY DC POWER indicator	Indicates that upper memory power is on by using +5 volts from HP 30311A Power Supply No. 2 to light this LED.
UPPER 128K MEMORY BATTERY STATUS indicator	Indicates battery status of HP 30311A Power Supply No. 2 by being on, flashing, or off.
LOWER 128K MEMORY ON/STANDBY toggle switch	In the ON position, one pole generates a DC Enable signal to its HP 30311A Power Supply. If the power supply is turned on, and if the SYSTEM ON/STANDBY and UPPER 128K MEMORY ON/STANDBY switches on ON, the power supply will power memory and maintain the charge on its battery. If either or both of these other switches are set to STANDBY, the HP 30311A powers memory by its battery backup power to the memory "refresh" circuits. The second pole maintains continuity of the system DC Enable line which enables the HP 30310A and HP 30312A Power Supply

LOWER 128K MEMORY DC POWER indicator	outputs. In the STANDBY position, the system DC Enable line is opened and all DC power supply outputs, except battery backuppowers to the upper 128K of memory are disabled.
LOWER 128K MEMORY BATTERY STATUS indicator	Indicates that lower memory power is on by using +5 volts from HP 30311A Power Supply No. 1 to light this LED.
Indicates battery status of HP 30311A Power Supply No. 1 by being on, flashing or off.	
HP 30310A Power Supply	Function
POWER ON/OFF toggle switch and indicator	Indicator lights when toggle switch is ON connecting AC power to power supply circuits. OFF position disables the HP HP 30310A.
HP 30311A Power Supply	Function
Power ON/OFF toggle switch	In ON position, connects "+20 volts" terminal from the HP 30310A Power Supply to the HP 30311A circuits to maintain the charge on the battery and to develop the required memory operating voltages. Off (down) position disables the HP 30311A and disconnects the battery to prevent discharging.
BATTERY TEST momentary toggle switch	Places power supply in a battery discharge mode for test purposes (simulates a power failure). Lights the battery test indicator.
RESET pushbutton	Resets the battery discharge mode returning the power supply to normal operation. Turns off the battery test indicator.
+5 indicator	When lighted, indicates that +5 volts is being produced by the HP 30311A Power Supply.

Table 1-5. Power Controls and Indicator Functions (32421A) (Cont.)

<p>CROWBAR/BATT TEST indicator</p> <p>BATTERY STATUS indicator</p>	<p>Used in conjunction with the BATTERY STATUS indicator to determine if the crowbar circuit has fired and shut down the power supply.</p> <p>Indicates battery condition by:</p> <ul style="list-style-type: none">a. Being on continuously for fully-charged condition. A bad (open) battery will also produce this condition.b. Flashing at 2 Hz when dischargingc. Flashing at 0.5 Hz when chargingd. Being off if battery is low or not installed.
HP 30312A Power Supply	Function
<p>POWER ON/OFF toggle switch</p> <p>ADJ R32 potentiometer, S2 momentary toggle switch, and LED</p>	<p>The ON position connects AC power to the power supply circuits. The OFF position removes AC power.</p> <p>The potentiometer is adjusted while the toggle switch is pressed until the LED in the upper right of the front panel lights and just goes out. When the toggle switch is released, the threshold level is incremented by 10 amperes.</p>

- NOTES:
1. ONE 9-CONDUCTOR 30311-60007 CABLE PER 30311A SUPPLY. PINS 2-2, 5-5, AND 8-8 ARE SPARES.
 2. ANY ADDITIONAL HP 30311A POWER SUPPLIES INCLUDED IN THE SYSTEM HAVE CONTROL LINES (EXCEPT TEMP SENSE) PARALLELED.

Table 1-7. Power Control and Indicator Functions (32435A)	
Control or Indicator	Function
BCHG	Lights steady for fully charged battery, blinks slowly while battery is charging, and blinks rapidly when battery is discharging. Remains unlighted when battery is fully discharged or is missing.
PFW	Lights when input AC power to the system is below specified value.
PON	Lights when AC power is applied to the power supplies and the power suplies are operating properly. Turns off when DC voltages decay because of power loss or a power supply fails.
LOGIC	When set to ENABLE, DC power is applied to all PCASS. When set to DISABLE, DC power is removed from all but memory PCAs.
LOGIC AND MEMORY	When set to ENABLE, DC power is applied to all PCAs, provided that the LOGIC switch is set to ENABLE. When set to DISABLE, all DC power is removed from all PCAs.

NOTES:

1. **CAUTION.** HEAT SINK IS +5V WITH RESPECT TO POWER SUPPLY CHASSIS.
2. WHEN INSTALLING DIODES IN THIS ASSEMBLY, USE THERMAL COMPOUND (HP STOCK NO. 6040-0239) ON BOTH SIDES OF INSULATING WASHERS OR ON METAL WASHER AND DIODE MOUNTING SURFACE.
3. TIGHTEN MOUNTING NUTS FOR CR1 THROUGH CR4 TO 30 IN.-LBS (0.35 kg-m).
4. TIGHTEN MOUNTING NUTS FOR CR9 THROUGH CR16 TO 15 IN.-LBS (0.17 kg-m).
5. REFERENCE DESIGNATION PREFIX IS A6.

1304-1

NOTES:

1. WHEN INSTALLING Q1, Q2, Q3, OR Q4, USE THERMAL COMPOUND (HP STICK NO. 6040-0239) BETWEEN TRANSISTOR AND HEAT SINK.
2. WHEN INSTALLING Q5, TIGHTEN MOUNTING NUT TO 15 IN. - LBS (0.17 kg.m).
3. REFERENCE DESIGNATION PREFIX IS A7.

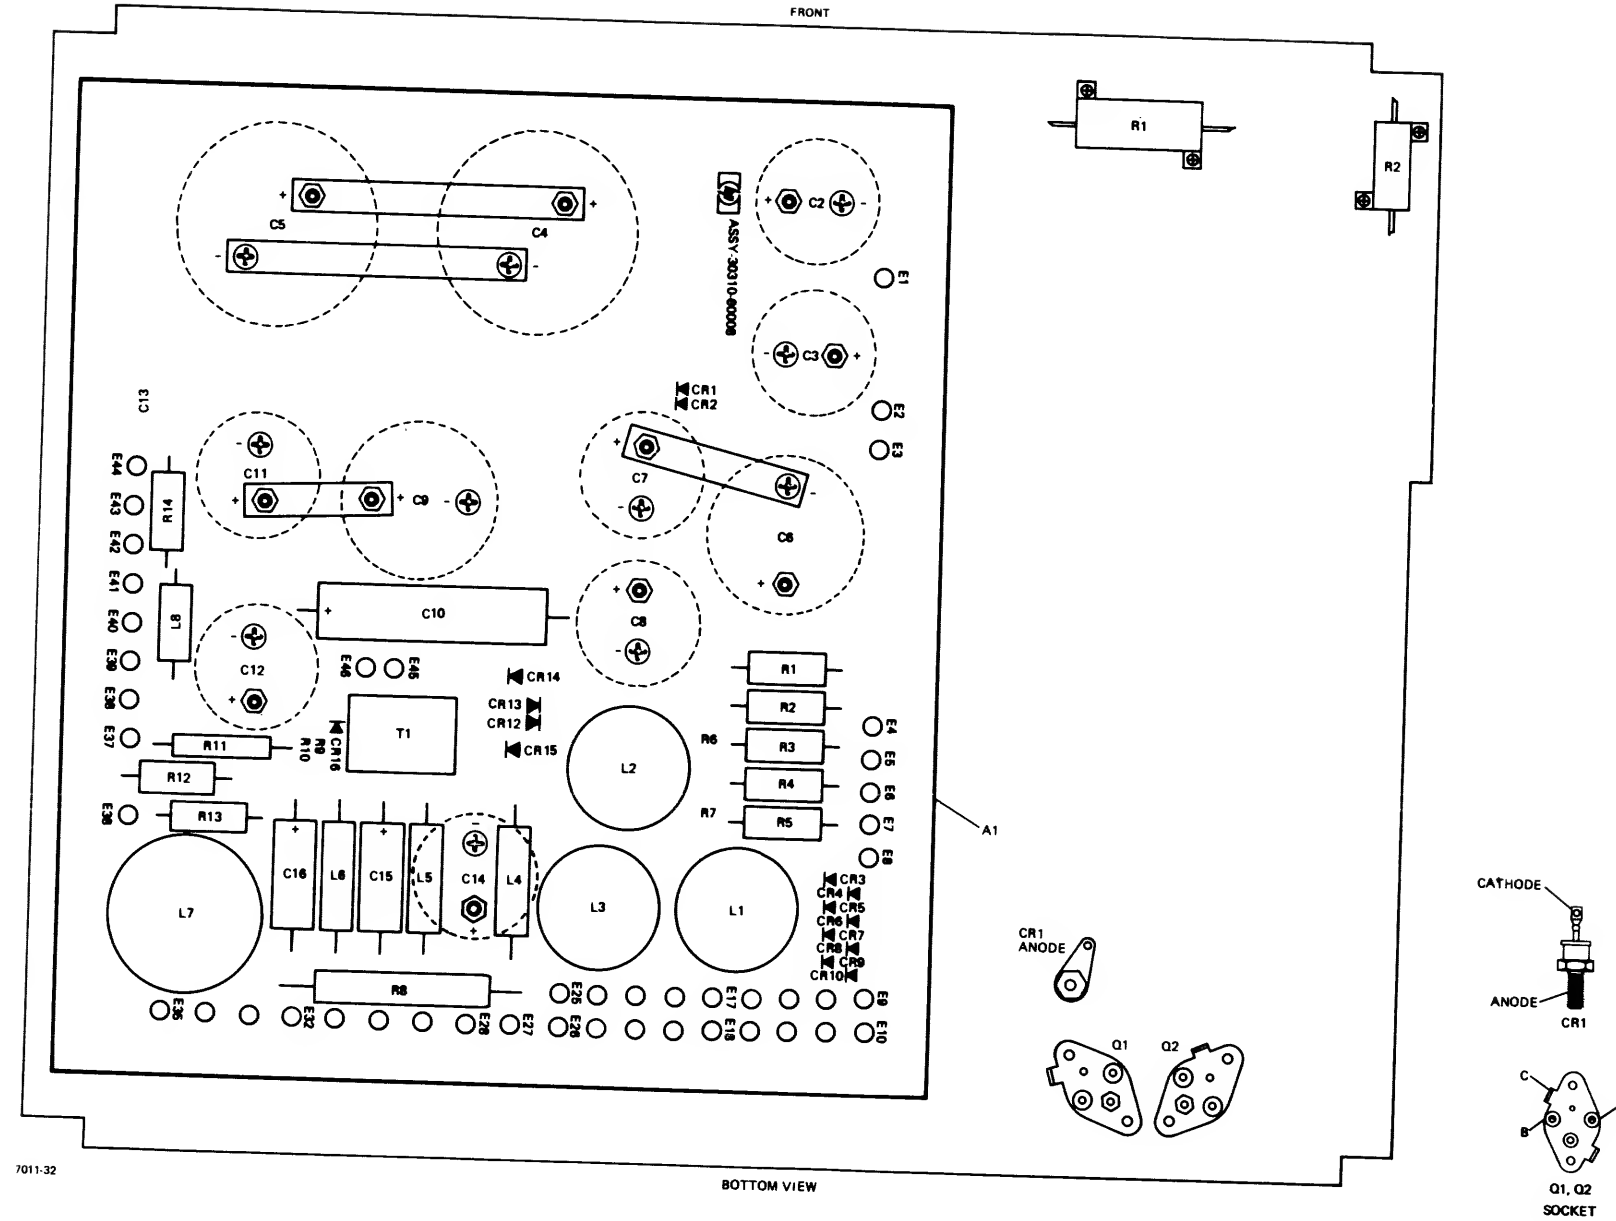

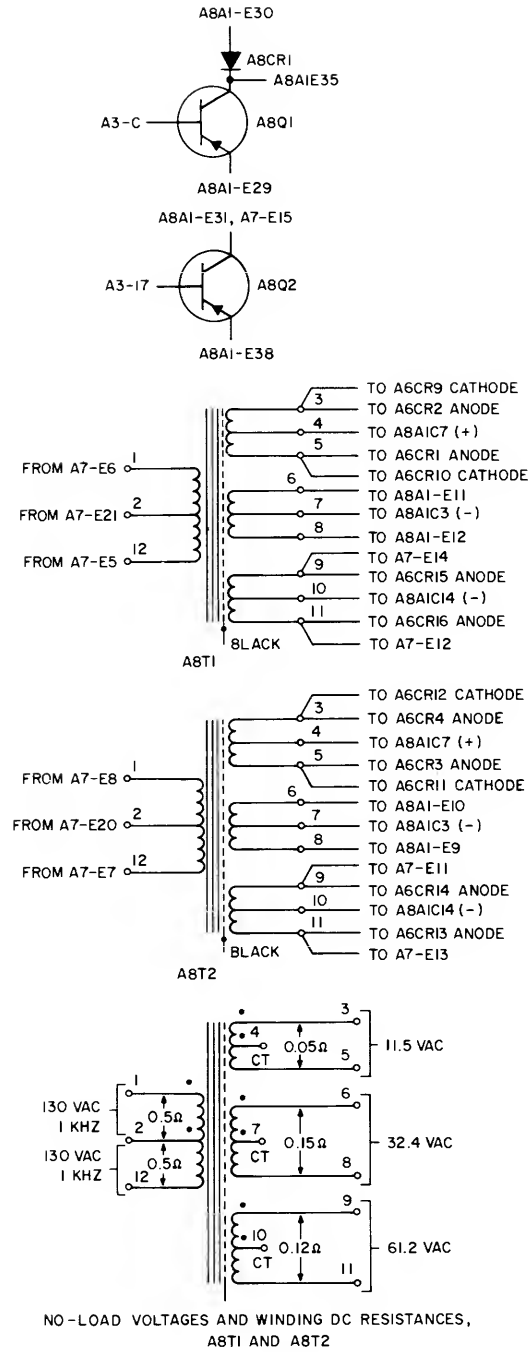

7011-33

TOP VIEW

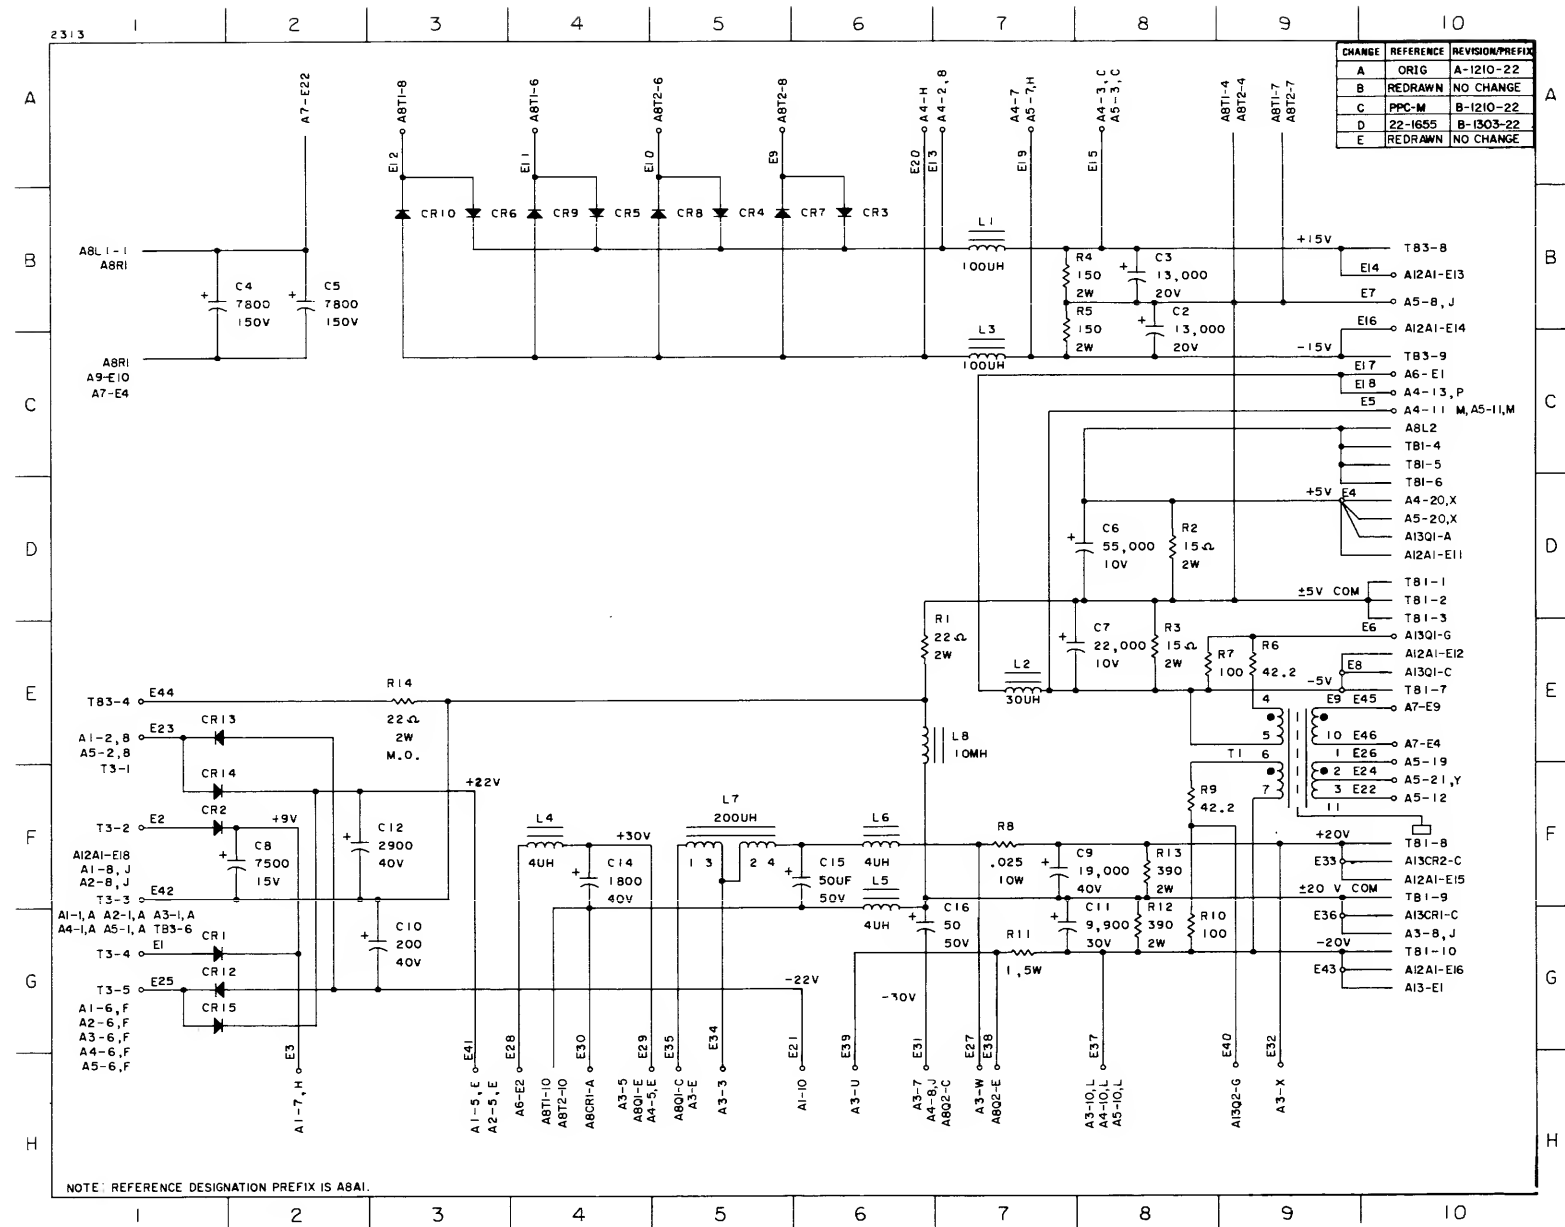

NOTES:

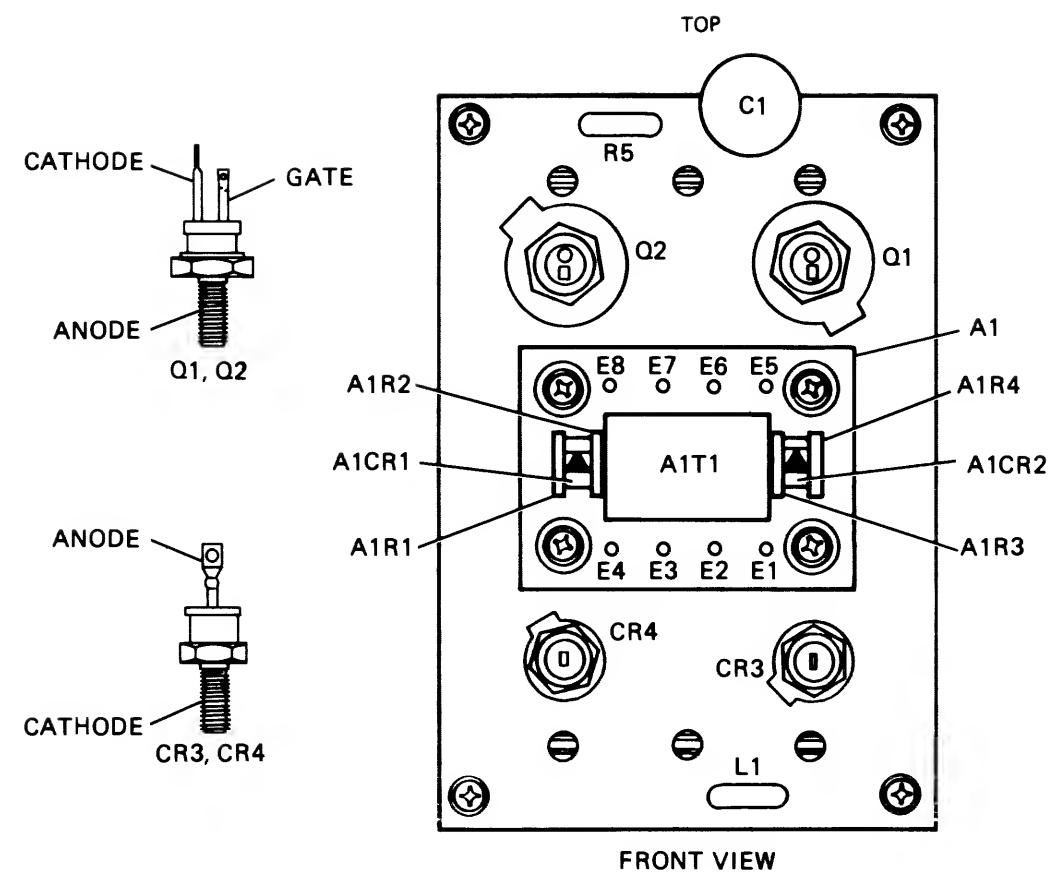

1. FOR CLARITY T1 AND T2, SITUATED ABOVE L1, ARE NOT SHOWN.
2. WHEN INSTALLING Q1 OR Q2 IN THE TRANSISTOR SOCKET, USE THERMAL COMPOUND (HP STOCK NO. 6040-0239) ON BOTH SIDES OF INSULATING WASHER.
3. TIGHTEN MOUNTING NUT FOR CR1 TO 15 IN.-LBS (0.17 kg-m).
4. COMPONENTS MAY VARY SLIGHTLY FROM LOCATIONS SHOWN.
5. REFERENCE DESIGNATION PREFIX IS A8.

NOTE:
ON LOW-RESISTANCE RANGES SOME OHMMETERS
APPLY AC TO THE COMPONENT BEING MEASURED.
THEREFORE AN ACCURATE READING WILL NOT BE
FURNISHED FOR INDUCTIVE COMPONENTS.

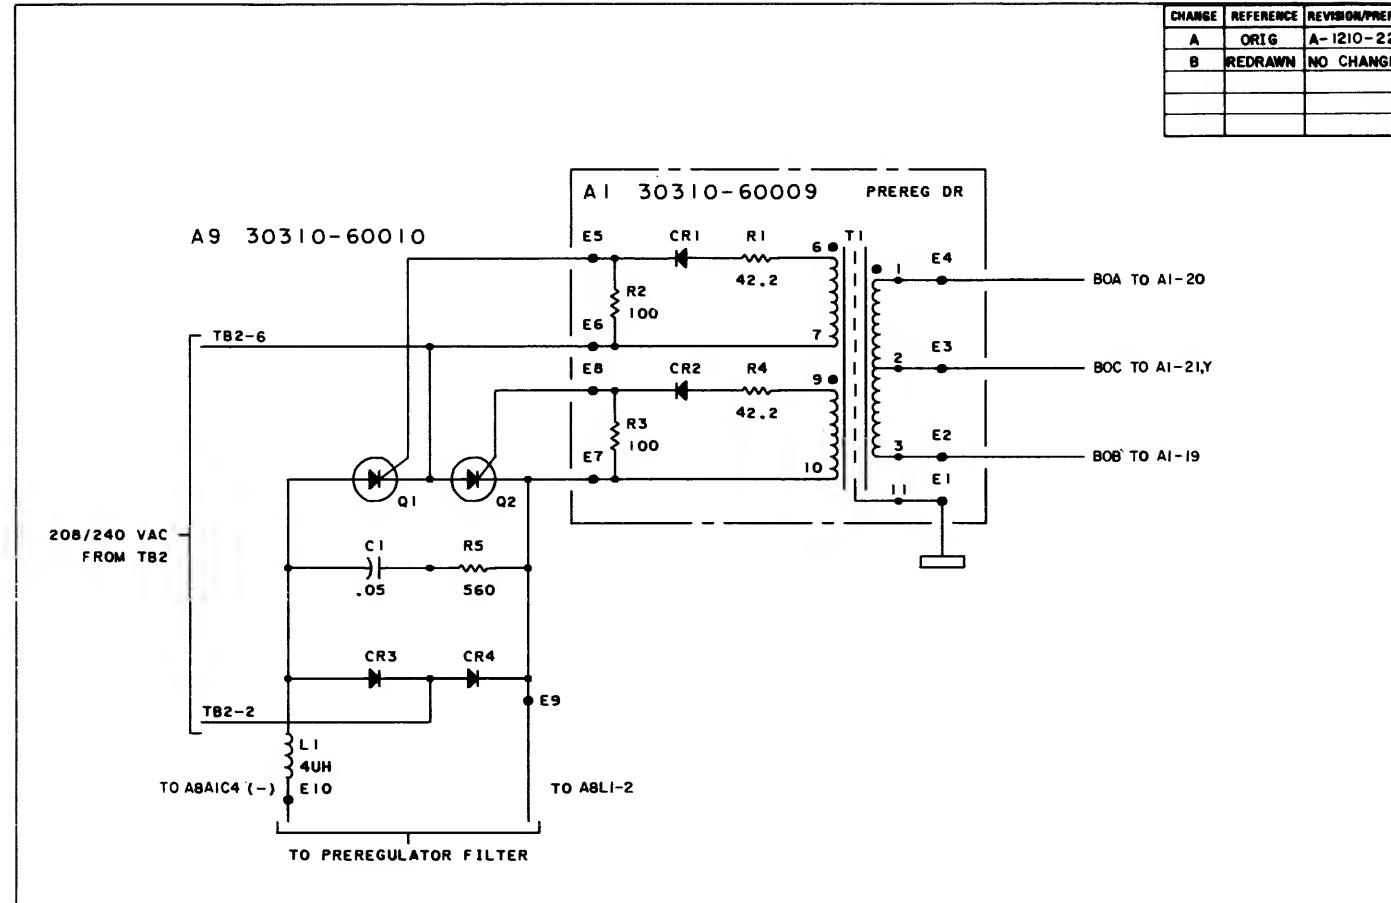

NOTES:

1. WHEN INSTALLING SEMICONDUCTOR DEVICES IN THIS ASSEMBLY, USE THERMAL COMPOUND (HP STOCK NO. 6040-0239) ON BOTH SIDES OF INSULATING WASHERS.
2. TIGHTEN ALL SEMICONDUCTOR MOUNTING NUTS TO 15 IN.-LBS (0.17 kg-m).
3. WHEN INSTALLING PLASTIC SCREWS USE THREAD SEALANT (HP STOCK NO. 0470-0013). DO NOT TIGHTEN EXCESSIVELY.
4. REFERENCE DESIGNATION PREFIX IS A9.

7011-30
